The Software Support Fee is a charge levied annually on all campus computers and is used to contribute to the funding necessary to provide UW-Eau Claire licensed software and software support. This covers the cost of licenses for campus-wide application software and infrastructure software directly used to support and maintain the campus computers. The present charge is based on projected budgets for approved software and maintenance.

A chargeback authorization will be sent to the Deans and Administrators of the Colleges and Divisions in the fall for that fiscal year.
