Kaltura "My Media" is a video and audio streaming service, similar to YouTube, located within Canvas. Anyone at UWEC can use Kaltura, even if you are not creating or sharing a video for a specific class. Videos are only accessible by the creator unless shared via URL or within a Canvas course.

**Instructions & More Information:**

- How to upload and share videos with Kaltura
- Kaltura app for mobile devices
- Tips for student-created videos - Kaltura vs Canvas
- Kaltura/YouTube integration
- Interactive video quizzing
- Kaltura video transition from D2L

**Recording with Kaltura:**

**To record yourself speaking:**

- Kaltura has a new Webcam Recorder option under Add New. No download needed! Here are Webcam Recorder instructions from UW-Madison.
- Canvas has a similar feature, except it only stores the video in Canvas (instructions for students / instructions for instructors). This often works well for student video introductions or other quick recordings that would not be reused. It can take a long time to process, so if your video is more than a few minutes long you may want to use the Kaltura Webcam Recorder instead.

**To record the computer screen (a screencast):**

- Kaltura Capture: This is Kaltura's new recording tool. More information: Install KalturaCapture - Windows & Mac / Record with KalturaCapture.

**To record a PowerPoint with audio:**
• It is usually best to record the audio within PPT's Record Slideshow feature, then export it as an mp4 since PPT records audio per slide, making it easy to re-record a slide if you make a mistake. This works well on both Windows and Mac. Here are instructions.

Editing:

• Kaltura has a video editor which allows for basic editing such as editing out mistakes or creating clips. Here is a video showing how to use the Kaltura editor.

Want Help? Contact the LTS Help Desk. Canvas Help does not support Kaltura.
