Some Android users have been experiencing battery drain issues after installing (or using) the Outlook app on their mobile device. This article is a guide to resolve battery drain issues due to the Outlook app.

1. **Open** Outlook app

2. **Tap** on the Menu button (top left "hamburger" icon)
3. **Tap** the Settings (cog-shape) button on the bottom-left of the screen
4. **Tap** your Office 365 account (username@uwec.edu)
5. **Tap** the slider button next to the "Sync contacts" text to turn it off

After tapping the slider, the slider should appear gray. If it is gray, you have completed the steps correctly, and your Outlook app will no longer cause the battery to drain excessively.
